

Aaman Sayyed — Portfolio Figma Blueprint

Goal

Design a backend-engineer-focused portfolio website that communicates:

- Engineering maturity
- Backend architecture understanding
- Production-ready thinking
- API and system design capability
- Professional clarity

The design should avoid flashy animation-heavy aesthetics.

Figma File Structure

Page 1 — Cover

Frame Size: 1440 x 1024

Content:

- Portfolio title
- Subtitle: Backend-Focused Full Stack Developer
- Minimal dark gradient background
- Small tech stack badges
- GitHub username

Style:

- Dark modern aesthetic
 - Minimal UI
 - Strong typography hierarchy
-

Page 2 — Design System

Colors

Background

- Background Primary → #0B0F19

- Background Secondary → #111827
- Card Background → #1F2937

Accent

- Blue → #3B82F6
- Cyan → #06B6D4
- Green → #10B981

Text

- Primary Text → #F9FAFB
 - Secondary Text → #9CA3AF
 - Muted Text → #6B7280
-

Typography

Font Family

- Inter
- JetBrains Mono

Font Scale

Hero Heading

- 72px
- Bold
- Line Height 90%

Section Heading

- 40px
- Bold

Card Heading

- 24px
- Semibold

Body

- 18px
- Medium

Small

- 14px
-

Spacing System

- 8px base grid
 - 16px
 - 24px
 - 32px
 - 48px
 - 64px
 - 96px
-

Border Radius

- Buttons → 16px
 - Cards → 24px
 - Inputs → 14px
-

Page 3 — Components

Navbar

Height: 88px

Structure:

- Logo/Text left
- Nav links center
- CTA button right

Links:

- Home
- Projects
- Experience
- GitHub
- Contact

CTA:

- Resume Download

Navbar Style:

- Glass effect
 - Backdrop blur
 - 1px subtle border
-

Buttons

Primary Button

- Filled blue
- White text
- Hover lift effect

Secondary Button

- Transparent
- Border outline

Ghost Button

- Text only
-

Project Card

Width: 420px

Contains:

- Project image
- Project title
- Description
- Stack tags
- Architecture tags
- GitHub button
- Live demo button

Card Layout:

- Thumbnail top
 - Content bottom
 - Clean spacing
 - Hover elevation
-

Stack Card

Small floating technology cards.

Example:

- Node.js
- Express.js
- MongoDB
- React

- Next.js
 - TypeScript
 - JWT
 - OAuth
-

Experience Timeline Card

Contains:

- Role
- Company
- Duration
- Bullet points

Timeline Style:

- Vertical left timeline
 - Minimal connector line
-

Page 4 — Desktop Layout

Frame: Desktop 1440 Width: 1440px

12-column layout grid. Margins: 120px Gutter: 24px

SECTION 1 — HERO

Height: 920px

Layout: Two-column split.

Left:

- Introduction
- Headline
- Short description
- CTA buttons

Headline: Aaman Sayyed

Subheading: Backend-Focused Full Stack Developer

Description: I build scalable APIs, authentication systems, and production-ready backend applications using Node.js and MongoDB.

Buttons:

- View Projects
- Download Resume

Right Side: Terminal-inspired developer card.

Elements:

- API request mockup
- Status indicators
- Small code blocks
- GitHub metrics card

Background: Subtle gradient mesh.

SECTION 2 — TRUSTED STACK

Title: Tech Stack

Grid Layout: 4-column grid.

Include:

- Node.js
- Express.js
- MongoDB
- React
- Next.js
- TypeScript
- JWT
- OAuth
- GitHub
- Docker
- Postman

Card Style:

- Floating cards
- Soft borders
- Slight glow

Avoid:

- Progress bars
 - Percentage skill indicators
-

SECTION 3 — FEATURED PROJECTS

Title: Featured Projects

Layout: Alternating project layout.

Project 1: Notification Service

Description: Built a reusable email notification system using Node.js and Nodemailer with modular architecture and configurable transport layers.

Architecture Tags:

- Modular Architecture
- Queue-ready
- Reusable Services

Stack:

- Node.js
 - Express.js
 - Nodemailer
-

Project 2: Movie Booking System

Description: Backend APIs for movie listings, authentication, seat booking, and ticket management using Express.js and MongoDB.

Architecture Tags:

- REST API
- Authentication
- Role-based Access

Stack:

- MongoDB
 - Express.js
 - JWT
-

Project Card Layout:

- Large thumbnail
- Project details
- GitHub button
- Architecture chips
- Stack chips

SECTION 4 — BACKEND ARCHITECTURE SHOWCASE

Title: Architecture Thinking

This section differentiates the portfolio.

Create architecture cards.

Cards:

JWT Authentication Flow

Visualize:

- Client Login
- Token Generation
- Protected Route Access
- Middleware Validation

MVC Architecture

Visualize:

- Route
- Controller
- Service
- Database

Request Lifecycle

Visualize:

- Request
- Validation
- Controller
- Database
- Response

MongoDB Indexing

Visualize:

- Query
- Indexed Field
- Fast Retrieval

Style:

- Diagram-heavy
 - Minimal labels
 - Technical UI
-

SECTION 5 — EXPERIENCE TIMELINE

Title: Experience

Timeline:

Support Lets Talk

Role: Full Stack Developer (Node.js)

Highlights:

- Migrated Laravel backend to Node.js
 - Improved maintainability
 - Built RESTful APIs
 - Added OAuth authentication
-

Awwaltech

Role: Back-end Developer Intern

Highlights:

- Built backend services
 - Designed MongoDB schemas
 - Improved API security
-

ResumerPro

Role: Full Stack Developer Intern

Highlights:

- Stack Overflow-inspired backend
 - MVC architecture
 - Authentication system
-

SECTION 6 — GITHUB SHOWCASE

Title: GitHub Activity

Layout: Two-column layout.

Left:

- Contribution graph
- Activity calendar

Right:

- Top repositories
- Commit activity
- GitHub stats

Add:

- Repo cards
- Language breakdown

GitHub: <https://github.com/sayyedaaman2>

SECTION 7 — ABOUT

Minimal section.

Text: Backend-focused developer with experience building RESTful APIs, authentication systems, and scalable backend architecture using Node.js and MongoDB.

Add:

- Small profile image
 - Current focus
 - Career goals
-

SECTION 8 — CONTACT

Minimal clean contact section.

Include:

- Email
- GitHub
- LinkedIn

- Resume Download

CTA: Let's build scalable systems.

SECTION 9 — FOOTER

Simple footer.

Include:

- Name
 - Copyright
 - Social links
-

Mobile Frames

Create:

- iPhone 15 Pro frame
- Tablet frame

Responsive Changes:

- Stack hero vertically
 - Collapse navbar
 - Single-column projects
 - Scrollable stack cards
-

Animation Guidance

Allowed:

- Fade-in sections
- Hover elevation
- Gradient glow
- Smooth transitions

Avoid:

- Heavy parallax
 - Excessive motion
 - Overdesigned interactions
-

Recommended Build Stack

Frontend:

- Next.js
- Tailwind CSS
- Framer Motion
- shadcn/ui

Deployment:

- Vercel
-

Critical Improvements From Old Portfolio

The current portfolio has these weaknesses:

- Weak visual hierarchy
- Generic developer layout
- Not enough backend differentiation
- Insufficient architecture communication
- Too much focus on simple project listing
- Lacks engineering storytelling

The redesign fixes this by:

- Making projects case-study driven
 - Showing system thinking
 - Adding architecture visualization
 - Improving typography hierarchy
 - Creating stronger recruiter scanning flow
 - Positioning as backend engineer instead of generic full-stack beginner
-

Final Design Principles

The portfolio should feel:

- Technical
- Structured
- Professional
- Mature
- Minimal
- Production-focused

It should NOT feel:

- Trend-chasing
- Animation-heavy
- Template-based
- Dribbble-clone style
- Junior/frontend-only focused
